Concepts in Biochemical Pharmacology Feb 26 2020 This volume of the Handbook of Experimental Pharmacology (Concepts in Biochemical Pharmacology) will show that pharmacology has finally arrived as a true discipline in its own right, and is no longer the handmaiden of organic chemistry and physiology. Instead it is an amalgam of all the biological sciences including biochemistry, biophysical chemistry, physiology, pathology and clinical medicine. In the volumes that make up Concepts in Bio chemical Pharmacology we hope to convince Medical Schools what should now be obvious, that pharmacology is no longer that dull topic bridging the basic sciences with medicine, but is probably the most important subject in the medical curriculum. We are grateful for the advice of Dr. Byron Clark, Director of the Pharmacology-Toxicology Program at the National Institutes of Health whose support made possible much of the work described in this volume. Reading the Vegetarian Vampire Sep 14 2021 This Pivot traces the rise of the so-called “vegetarian” vampire in popular culture and contemporary vampire fiction, while also exploring how the shift in the diet of (some) vampires, from human to animal or synthetic blood, responds to a growing ecological awareness that is rapidly reshaping our understanding of relations with others species. The book introduces the trope of the vegetarian vampire, as well as important critical contexts for its discussion: the Anthropocene, food studies, and the modern practice, politics and ideologies of vegetarianism. Drawing on references to recent historical contexts and developments in the genre more broadly, the book investigates the vegetarian vampire’s relationship to other more violent and monstrous forms of the vampire in popular twenty-first century horror cinema and television. Texts discussed include Interview with the Vampire, Buffy the Vampire Slayer, Twilight, The Vampire Diaries and True Blood. Reading the Vegetarian Vampire examines a new aspect of contemporary interest in considering vampire fiction.

Strengthening Forensic Science in the United States Dec 18 2021 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Policy to Practice Jul 25 2022 Mental illness is a growing issue in today's society and the tools needed to intervene when this population encounters the criminal justice system are a constant challenge. The odds of coming into contact with the justice system for those who have been diagnosed with a mental illness are greater than those without a mental health

diagnosis and even greater for individuals diagnosed with a serious mental health illness. According to the Bureau of Justice Statistics, 64% of jail inmates have a mental health issue and there still seems to be an underlying challenge of how we respond effectively to the needs of these individuals when they are released into the community. The Trueblood case that took place in Washington State was the tipping point in addressing these issues (Trueblood v. Washington, 2015). The Trueblood case mandated that the Department of Social and Health Services (DSHS) develop policy to effectively intervene and treat justice involved serious mentally ill individuals. This intensive case study on post-Trueblood practices is to complete a gap analysis on the policies, procedures, and practices of criminal justice professionals and social actors who supervise JI-SMI individuals in the communities of Spokane County, Washington. The purpose of the study is to show how probation officers and criminal justice professionals, with diverse practice styles, intentions, and levels of influence implement state policies and procedural changes at the county level. This study will aim to identify the responsibilities, complexities, strengths, and weaknesses of state policy translating to practice for institutions and criminal justice professionals involved in the treatment of JI-SMI individuals. The main goal of this study is to identify how state policy and procedural changes produced from the Trueblood Agreement translate to practice at the county and local level level.
