The Turtle and the Caduceus are metaphors  
for the impact of Western medicine (the  
Caduceus) upon a traditional Pacific island  
culture (the Turtle), through the history of  
a school which started training native  
medical practitioners 125 years ago. David  
Brewster, the former Dean of Fiji School of  
Medicine, tells the fascinating tale of how  
a devastating measles epidemic and pro-  
indigenous benign colonialism led the  
foundation of this unique school. Then,  
Rockefeller philanthropy helped to transform  
it into a regional institution with an  
excellent reputation. However, its evolution  
into a modern university medical school was  
hampered by local politics and internal

dissensions related to ethnic strife between the indigenous and Indian populations of Fiji, which also resulted in four military coups with economic stagnation and migration of medical graduates. This cautionary tale has important lessons for the relatively neglected disciplines of Pacific island history and medicine. The second edition of *Emergency and Trauma Care for Nurses and Paramedics* provides the most up-to-date and comprehensive coverage of clinical procedures and issues encountered in contemporary emergency care in Australia and New Zealand. Written by leading academics and clinicians, this fully revised and updated edition follows the patient's journey from pre-hospital retrieval to definitive care. With a strong focus on multidisciplinary care, this evidence-based emergency and trauma resource will appeal to pre-hospital care providers, rural, remote and urban emergency nurses and allied health professionals, as well as disaster management and interfacility transport staff. Essential concepts are covered in a logical order, commencing with: An introduction to emergency professions and professional issues Clinical and health systems Patient presentations ordered by

body system as well as toxicology, envenomation, ocular, environmental emergencies and unique population groups Major trauma assessment and management and end-of-life care information and considerations. Emergency and Trauma Care for Nurses and Paramedics 2e continues to be the pre-eminent resource for students preparing to enter the emergency environment and for clinicians seeking a greater understanding of multidisciplinary care from retrieval through to rehabilitation. A cultural safety approach is included throughout - addressing cultural diversity, beliefs and values and focusing on Aboriginal and Torres Strait Islander health and Māori health Essentials outline the main points addressed in each chapter Practice tips throughout assist with communication skills, procedures and assessment Case studies are supported by questions and answers to encourage active learning New online resources available on Evolve, including over 30 new case studies with paramedic-specific questions. Highlighted skills - cross references to the Clinical Skills chapter throughout text Over 30 new case studies Patient journey from pre-hospital and emergency-specific case studies

Critical thinking questions at the end of chapters Chapter 35 Obstetric emergencies now includes 'Supporting a normal birth'. This is an inclusive reference exploring the scientific basis and practice of drug therapy. The key concept is to look at the balance between the benefits and risks of drugs but in this context also the social impact which drugs have in modern societies is highlighted. Taking an evidence-based approach to the problem, the practice of clinical pharmacology and pharmacotherapy in the developing as well as the developed world is examined. For this purpose the book

- \* Covers general clinical pharmacology, pharmacology of various drug groups and the treatments specific to various diseases \*
- \* Gives guidance on how doctors should act so that drugs can be used effectively and safely \*
- \* Encourages the rational use of drugs in society

This book brings together a large amount of excellent content that will be invaluable for anyone working within, or associated with, the field of clinical pharmacology and pharmacotherapy - undergraduates, postgraduates, regulatory authorities and the pharmaceutical industry. This new edition of the best-selling manual, The Royal Children's Hospital Melbourne

Paediatric Handbook 9th Edition is a succinct and practical guide to managing common and serious disorders in childhood. Relevant to medical, nursing and allied health fields, this is both a useful source for revision and an essential guide to clinical management and rapid decision-making at the point of care. For this edition, the handbook has been restructured according to body systems and is now more closely aligned with the Royal Children's Hospital Clinical Practice Guidelines. It also includes updated evidence-based information in all chapters, an additional genetics chapter, new renal and oncology chapters and fully updated drug doses. The Handbook includes: Clear illustrations, and plenty of accessible diagnostic and management algorithms A Paediatric Pharmacopoeia Step-by-step guidelines for paediatric procedures Emphasis on the modern, community-based approach to the management of children's problems A strong emphasis on practical management by the doctor at first contact With well-presented, summarized information that you can easily access during a consultation, this text is also an excellent supplemental handbook for students, junior medical staff and medical

practitioners. In the highly specialized field of caring for children in the PICU, Fuhrman and Zimmerman's *Pediatric Critical Care* is the definitive reference for all members of the pediatric intensive care team. Drs. Jerry J. Zimmerman and Alexandre T. Rotta, along with an expert team of editors and contributors from around the world, have carefully updated the 6th Edition of this highly regarded text to bring you the most authoritative and useful information on today's pediatric critical care—everything from basic science to clinical applications. Contains highly readable, concise chapters with hundreds of useful photos, diagrams, algorithms, and clinical pearls. Uses a clear, logical, organ-system approach that allows you to focus on the development, function, and treatment of a wide range of disease entities. Features more international authors and expanded coverage of global topics including pandemics, sepsis treatment in underserved communities, specific global health concerns by region. Covers current trends in sepsis-related mortality and acute care after sepsis, as well as new device applications for pediatric patients. A themed collection from *The Lancet*, dedicated

to traumatic injury and surgery. The first Article presents new estimates of death following general surgery. The Europe-wide study finds death rates after surgery are double that of previous estimates. According to the second Article, survival after a general anaesthetic and within 48 hours of surgery has greatly improved worldwide over the past 50 years. An accompanying Comment calls for application of effective perioperative practices to under-resourced settings. New research published in the third Article on surgery suggests that the millions of intravenous catheters used each year can be safely changed only when clinically necessary, overturning 40 years of accepted practice. Also in this collection, a three-part series on trauma surgery reviews recent progress and challenges in the management of acute trauma care in haemorrhagic shock, traumatic brain injury, and major musculoskeletal injury. The Series not only reveals progress in the understanding of genomic, proteomic, and physiological changes related to severe injury and of the response to resuscitation and surgery, but also presents global initiatives to address shortcomings in previous approaches to trauma research. An

associated Comment urges for research so that "injured people can benefit from the sorts of research-based advances that have transformed other fields of healthcare". The Lancet commissions Series and themed issues to highlight clinically important topics and areas of health and medicine that are pertinent to physicians' practice. They are groups of two or three articles which provide pathophysiology, basic science, and genomic insights, as well as practical, up-to-date clinical information on a variety of important or neglected disorders. Still the #1 resource for today's pediatric ICU teams, Pediatric Critical Care, 5th Edition covers the entire field, from basic science to cutting-edge clinical applications. Drs. Bradley P. Fuhrman and Jerry J. Zimmerman, accompanied by an expert team of editors and contributors from around the world, bring you today's best information on the current and future landscape of pediatric critical care so you can consistently deliver optimum care to your young patients. Boasts highly readable, concise chapters with hundreds of useful photos, diagrams, algorithms, and clinical pearls. Clear, logical, organ-system approach allows you to focus on the development, function, and treatment of a

wide range of disease entities. Includes new content on the expanding use of ultrasound at the bedside and the increase in nursing responsibilities in the PICU. Eighteen new chapters cover topics such as delirium, metabolism, endocrinology, nutrition, nursing, and much more. Features expanded and updated information on critical communication, professionalism, long-term outcomes, palliative care, ultrasonography, PCCM in resource-limited settings, ventilator-induced lung injury, non-invasive ventilation, updated CNS pathophysiology, the 'Erythron', and immunity and infection. This book contributes to current bioethical debates by providing a critical analysis of the philosophy of human death. Bernard N. Schumacher discusses contemporary philosophical perspectives on death, creating a dialogue between phenomenology, existentialism and analytic philosophy. He also examines the ancient philosophies that have shaped our current ideas about death. His analysis focuses on three fundamental problems: (1) the definition of human death, (2) the knowledge of mortality and of human death as such, and (3) the question of whether death is 'nothing' to us or, on the contrary, whether it can be regarded as an

absolute or relative evil. Drawing on scholarship published in four languages and from three distinct currents of thought, this volume represents a comprehensive and systematic study of the philosophy of death, one that provides a provocative basis for discussions of the bioethics of human mortality. A collection of letters written by Edward Shann to his brother Frank Shann, and one notebook. The letters are mostly of four pages each, but some considerably longer. Most are dated 1909 and were written while Professor Shann was in London. They contain many references to family affairs, and much comment on political and economic affairs both in Australia and England, and on university appointments etc. in Australia. There are two additional letters, one from F. A. Warner and one from Sir John McCall. There is also a sepia photograph of Sydney Webb, a list of Shann correspondence, a draft headed "Chapter XXV : an epilogue", university degrees and a copy of an application to Perth University for Professor of History and Economics. Violence and injustice are two major political problems facing the world today. Offering a fresh, innovative analysis of the concept of violence, this book presents an original

insight into the nature of injustice. Addressing three key questions, it forces us to rethink the scope and aims of a theory of social justice. Many of Australia's first Fabians are known as legislators, priests, jurists, men and women of letters, diplomats, feminists and educators, yet few are recognised as Fabians. Until this book, little attention has been given to Australian Fabian thinkers, activists and organisations, and their long-term influence on Australian political and intellectual life. This book recreates the lives of the first Fabians in Australia, their political ideas and strategies, and presents their visions for society in a lively and entertaining way. It also explores the similarities between the Fabian Society's development in Britain and Australia. The book will fill a long-standing gap in Australian intellectual history and the history of early socialist movements in Australia. From the internationally acclaimed scientist, explorer, and conservationist comes an awe-inspiring account of earth's evolution. Beginning at the moment of creation with the Big Bang, Here on Earth explores the evolution of Earth from a galactic cloud of dust and gas

to a planet with a metallic core and early signs of life within a billion years of being created. In a compelling narrative, Flannery describes the formation of the Earth's crust and atmosphere, as well as the transformation of the planet's oceans from toxic brews of metals (such as iron, copper, and lead) to life-sustaining bodies covering seventy percent of the planet's surface. Life, Flannery shows, first appeared in these oceans in the form of microscopic plants and bacteria, and these metals served as catalysts for the earliest biological processes known to exist. From this starting point, Flannery tells the fascinating story of the evolution of our own species, exploring several early human species—from the diminutive creatures (the famed hobbits) who lived in Africa around two million years ago to *Homo erectus*—before turning his attention to *Homo sapiens*. Drawing on Charles Darwin's and Alfred Russell Wallace's theories of evolution and Lovelock's Gaia hypothesis, *Here on Earth* is a dazzling account of life on our planet. "You'll discover why Tim Flannery's books have made him the rock star of modern science." —Jared Diamond, Pulitzer Prize-winning author of *Guns, Germs, and*

Steel This book deals with the history of surgery in Papua New Guinea from the early 1800s until the beginning of the 21st Century. It spans the period from the first European contact to the emergence of highly educated sub-specialist national surgeons. It tells the story from the first impressions of ships surgeons to the introduction and development of surgery. Between 1870 and 1950 the country and the lives of its peoples changed greatly as a result of exploration, evangelisation, colonisation and war. The history traces the surgical challenges encountered as well as the colourful characters who provided the health services run by missions, companies, governments and armies. After World War II PNG progressed politically from an Australian Administered Territory to become an Independent Nation. Within a generation it had trained its own doctors and surgeons. The history is set within the context of tropical pathologies, introduced diseases, surgical progress and the lives of the medics who have contributed to the Stori bilong kamapim long dokta bilong katim man (The history of surgery). This revised and updated guide presents a proven method for policy and health professionals to promote

community-based progress in developing nations. Daniel C. and Carl E. Taylor built their decades-long careers by partnering with key thinkers to combat inequity, environmental degradation, and globalization. Their innovative SEED-SCALE model enables people to transform their communities by analyzing their local context in relation to the global, taking appropriate actions based on their priorities and resources, and assessing what next steps may be needed for continuing progress. *Just and Lasting Change* describes, step by step, how the SEED-SCALE model can be effectively implemented. Drawing from a variety of personal experiences and case studies, the authors describe historical attempts to promote social development, as well as current efforts in South America, Africa, and Asia. This wide-ranging book touches on examples of community-based change from Abraham Lincoln's leadership style to the Green Bay Packers's ownership model. It also explores thematic global examples from the anti-smoking campaign, Green Revolution, Child Survival Revolution, and urban agriculture. This second edition is fully revised and updated with: Five completely new chapters Thirteen years of

scholarship and global evidence New contributions from leading international experts in community-based development and public health This booklet includes the dose of every drug commonly prescribed for systemic use in both adults and children, except for diagnostic agents. The booklet does not list the side effects of drugs, indications for their use, or modifications for renal or hepatic failure. Copies of the booklet may be ordered from [orders@drugdoses.com](mailto:orders@drugdoses.com). From the National Book Award-winning author of *The Noonday Demon: An Atlas of Depression* comes a monumental new work, a decade in the writing, about family. In *Far from the Tree*, Andrew Solomon tells the stories of parents who not only learn to deal with their exceptional children but also find profound meaning in doing so. Solomon's startling proposition is that diversity is what unites us all. He writes about families coping with deafness, dwarfism, Down syndrome, autism, schizophrenia, multiple severe disabilities, with children who are prodigies, who are conceived in rape, who become criminals, who are transgender. While each of these characteristics is potentially isolating, the experience of difference within families

is universal, as are the triumphs of love Solomon documents in every chapter. All parenting turns on a crucial question: to what extent parents should accept their children for who they are, and to what extent they should help them become their best selves. Drawing on forty thousand pages of interview transcripts with more than three hundred families, Solomon mines the eloquence of ordinary people facing extreme challenges. Whether considering prenatal screening for genetic disorders, cochlear implants for the deaf, or gender reassignment surgery for transgender people, Solomon narrates a universal struggle toward compassion. Many families grow closer through caring for a challenging child; most discover supportive communities of others similarly affected; some are inspired to become advocates and activists, celebrating the very conditions they once feared. Woven into their courageous and affirming stories is Solomon's journey to accepting his own identity, which culminated in his midlife decision, influenced by this research, to become a parent. Elegantly reported by a spectacularly original thinker, *Far from the Tree* explores themes of generosity, acceptance, and tolerance—all rooted in the

insight that love can transcend every prejudice. This crucial and revelatory book expands our definition of what it is to be human. 'I am unaware of any textbook which provides such comprehensive coverage of the field and doubt that this work will be surpassed in the foreseeable future, if ever!' From the foreword by Robert C. Moellering, Jr., M.D, Shields Warren-Mallinckrodt Professor of Medical Research, Harvard Medical School, USA

Kucers' *The Use of Antibiotics* is the leading major reference work in this vast and rapidly developing field. More than doubled in length compared to the fifth edition, the sixth edition comprises 3000 pages over 2-volumes in order to cover all new and existing therapies, and emerging drugs not yet fully licensed. Concentrating on the treatment of infectious diseases, the content is divided into 4 sections: antibiotics, anti-fungal drugs, anti-parasitic drugs and anti-viral drugs, and is highly structured for ease of reference. Within each section, each chapter is structured to cover susceptibility, formulations and dosing (adult and paediatric), pharmacokinetics and pharmacodynamics, toxicity and drug

distribution, detailed discussion regarding clinical uses, a feature unique to this title. Compiled by an expanded team of internationally renowned and respected editors, with a vast number of contributors spanning Europe, Africa, Asia, Australia, South America, the US and Canada, the sixth edition adopts a truly global approach. It will remain invaluable for anyone using antimicrobial agents in their clinical practice and provides in a systematic and concise manner all the information required when treating infections requiring antimicrobial therapy. Kucers' The Use of Antibiotics is available free to purchasers of the books as an electronic version on line or on your desktop: It provides access to the entire 2-volume print material It is fully searchable, so you can find the relevant information you need quickly Live references are linked to PubMed referring you to the latest journal material Customise the contents - you can highlight sections and make notes Comments can be shared with colleagues/tutors for discussion, teaching and learning The text can also be reflowed for ease of reading Text and illustrations copied will be automatically referenced to Kucers' The Use of Antibiotics This book

Margaret Chan, Director General of the World Health Organization, has stated that "Universal Health Coverage is the single most powerful concept that public health has to offer." In this Series from The Lancet, the first of three papers explores the evidence on the links between expansions in coverage and population health outcomes. The second paper looks at the political and economic dimensions of the transition to universal health coverage, and the third examines nine low-income and lower-middle-income countries in Africa and Asia that have implemented national health insurance reforms. Also, a Viewpoint calls

for continued progress and argues for a large public sector role in health systems reform. What becomes clear in this issue is that although universal health coverage is not a guarantee for progress, attention should focus now not on whether, but on how to make the most of the transition. In a Comment, Judith Rodin and David de Ferranti conclude: "what will emerge in the decades ahead in each country undertaking reform is not entirely clear, but, as this Series and many country examples suggest, we are getting closer to a time when this [transition toward universal health coverage] will be achieved and families will no longer be at risk of having the cost of sickness ruin their lives." The Lancet Global Health Series are groups of articles on a topic of global health importance. Series papers and Comments, related articles, links to relevant publications, media highlights, and audio interviews are available from <http://www.thelancet.com/global-health-series>. Research into prevalent conditions and wider health policy issues are reported by a range of experts. Course covers topics in infectious diseases in children and is intended for Pediatric Infectious disease trainees, trainers, and

all those who manage children with infections. This volume covers topics in infectious diseases in children and is intended for Pediatric Infectious Disease trainees, trainers, and all those who manage children with infections. There is a balance of clinical basic science. In response to numerous requests, additional tropical topics are covered in some depth. As in previous volumes, the emphasis is on hot topics of clinical relevance delivered by world class speakers. This heart-warming book of true stories is about women who lived during four different centuries. It testifies to the strength of mind of women forced to cope with wars and illness while protecting and educating their children, and it shows how family members worked together as the British Empire spread. Margaret Rudston was caught up in the English Civil War. When her husband died, she had to fight in court to keep the family property. Margaret's solicitor gave her copies of poems by John Donne, which now reside in the Folger Library in Washington, D.C. Maria Barstow endured twenty years of wars in Danzig (now Gdansk in Poland), where her house was inhabited at different times by the future queen of Holland, the French

army, Napoleon, and the Russian army. Some of her children were sent to England. Mrs. Jones and her children fled from Ireland when the French landed to support a rebellion. The daughters of the hymn writer, the Rev. Thomas Kelly, lived in Ireland through illness and the famine. They learned painting from Maria Spilsbury and wrote memoirs. Joan Webber taught in Malaya (now Malaysia), and escaped to Australia with her children during World War II, while her husband was fighting the Japanese. The family later settled in Tasmania. One of her children, author Sylvia Webber writes how war, separation, and boarding school affected her. These stories show families pulling together, helping the human spirit to survive.
