Traveling in a First-Class Cabin on the luxury liner France early in 1963, the Western world's most famous painting sailed across the Atlantic on its maiden voyage to the United States. The goodwill generated by the loan eased U.S.-French relations, which had soured over tensions stemming from the cold war. The

mastermind behind the Mona Lisa's triumphant tour was France's newly appointed minister of cultural affairs, Andre Malraux. In this book, Herman Lebovics recounts how Malraux's brilliant foray into the realm of diplomacy was but one example of his efforts to employ France's cultural heritage in the service of a renewed national grandeur. *Languaging Diversity: Identities, Genres, Discourses* is a suggestive title for 'another' book in the field of linguistics, but what does it actually mean? By choosing to speak of *Languaging Diversity* and not just of difference, otherness, varieties, multiplicity, hybridity or alterity, the editors cover the whole range of meanings in the entire field of diversity. They do not wish to limit themselves by using such specific words with increasingly specialised connotations as *Alterity* or *Other*, but rather to allow an eclectic range of perspectives and issues to come to the fore. This volume brings together some of the manifold discourses emerging as bearers of the values of alterity, by exploring the thorny relationship between *Language and Diversity*. Drawing on the crucial assumption that speakers' identities are dynamically negotiated as discourse unfolds, *Languaging Diversity* explores the wide theme of identity in discourse, an area of investigation which has become increasingly popular in recent years. A key theme in assembling this volume was that the relationship between diversity and identity cannot be alienated from the factual distribution of material resources in society. All contributions in the volume – carefully selected and peer reviewed – at least partially react to such critical scenery in order to explore the topics surrounding the modes in which diversity is linguistically articulated by and in discourse. The various studies deal with how individuals draw on linguistic resources to achieve, maintain or challenge representations pertaining to their cultural, social, ethnic, sexual, gender, professional, or institutional identities. The volume comprises six sections: *In the News*; *In Politics*; *Constructing Identities*; *Across Generations and Genders*; *Ethnicities*; and *Popularising Ideas*. Each section reflects the choice of the various topics through the employment of a variety of methodologies and a variety of theoretical frameworks. As such, this volume is an innovative attempt to challenge the present-day underpinnings of diversity studies. The papers in this volume are the refereed papers presented at AI-2011, the Thirty-first SGAI International Conference on Innovative Techniques and Applications of Artificial Intelligence, held in Cambridge in December 2011 in both the technical and the application streams. They present new and innovative developments and applications, divided into technical stream sections on *Planning*, *Evolutionary Algorithms*, *Speech and Vision*, and *Machine Learning*, followed by application stream sections on *Knowledge Discovery and Data Mining*, *Machine Learning*, *Evolutionary Algorithms* and *AI in Action*. The volume also includes the text of short papers presented as posters at the conference. This is the twenty-eighth volume in the *Research and Development in Intelligent Systems* series, which also incorporates the nineteenth volume in the *Applications and Innovations* in

Intelligent Systems series. These series are essential reading for those who wish to keep up to date with developments in this important field. Appropriate for any course introducing management information systems from a business perspective. This casebook will serve as an ideal complement to most MIS/CIS textbooks. Designed to demonstrate how software can support managerial decision-making activities, this casebook features 24 cases (more than another casebook currently on the market) covering a wide range of functional areas throughout the business, including finance/accounting, HR, production, and information systems. The cases are spread across three difficulty levels basic, intermediate, and advanced. They present common managerial issues and problems, and encourage students to actually use their models to make decisions for the cases characters. They require students to apply spreadsheet, database, Web-page development, and/or presentation graphics software, often in an integrated manner. Many of the cases require students to prepare both written and oral presentations on their solutions. Among the topics covered in MIS Cases: Decision Making with Application Software Second Edition: forecasting, inventory decisions, what-if analyses, pricing strategies, billing decisions, and much more. "This book presents in-depth insight through a case study approach into the current state of research in ICT as well as identified successful approaches, tools and methodologies in ICT research"--Provided by publisher. This book investigates the role that ambiguous evidence can play in the acquisition of syntax. To illustrate this, the book introduces a probabilistic learning model for syntactic parameters that learns a grammar of best fit to the learner's evidence. The model is then applied to a range of cross-linguistic case studies – in Swiss German, Korean, and English – involving child errors, grammatical variability, and implicit negative evidence. Building on earlier work on language modeling, this book is unique for its focus on ambiguous evidence and its careful attention to the effects of parameters interacting with each other. This allows for a novel and principled account of several acquisition puzzles. With its inter-disciplinary approach, this book will be of broad interest to syntacticians, language acquisitionists, and cognitive scientists of language. How significant is the threat when a mandatory hurricane evacuation is ordered that requires everyone, including all military, to abandon Florida? That's what Kara Cook, a TV reporter from Miami, wondered when given the assignment to cover a hurricane approaching South Florida. Kara faced the killer across the ocean before as a young girl. She reluctantly accepted the challenge in hopes of advancing her career, but had no idea how she'd overcome her mortal fear of hurricanes. Due to the miscalculations surrounding Katrina, the mandatory evacuation was stringently enforced. The enemy took advantage of the chaos and planned an attack. Kara and a young Cuban man from the hurricane center found they were the only ones remaining that could repel the assault. Can Kara overcome her phobia of hurricanes and thwart the attack or will she succumb to her deepest

fears? Will the enemy take control of Florida? Throughout this fascinating saga, Diveley guides the reader through a maze of clues that ultimately reveals how the attack was orchestrated by an unforeseen enemy. Diveley illuminates how the seemingly insignificant favors given to government employees were strung together to form a stream of events that made the entire attack possible. Heather Laing examines, for the first time, the issues of gender and emotion that underpin the classical style of film scoring, but that have until now remained unquestioned and untheorized, thus providing a benchmark for thinking on more recent and alternative styles of scoring. Many theorists have discussed this type of music in film as a signifier of emotion and 'the feminine', a capacity in which it is frequently associated with female characters. The full effect of such an association on either female or male characterization, however, has not been examined. This book considers the effects of this association by progress through three stages: cultural-historical precedents, the generic parameters of melodrama and the woman's film, and the narrativization of music in film through diegetic performance and the presence of musicians as characters. Case studies of specific films provide textual and musical analyses, and the genres of melodrama and the woman's film have been chosen as representative not only of the epitome of the Hollywood scoring style, but also of the narrative association of women, emotion and music. Laing leads to the conclusion that music functions as more than merely a signifier of emotion. Rather, it takes a crucial role in both indicating and determining how emotion is actually understood as part of the construction of gender and its representation in film. Recent evidence indicates that humor is an important aspect of a person's health, and studies have shown that increased levels of humor help with stress, pain tolerance, and overall patient health outcomes. Still, many healthcare providers are hesitant to use humor in their practice for fear of offense or failure. Understanding more of how and why humor works as well as some of the issues related to real-world examples is essential to help practitioners be more successful in their use and understanding of humor in medical care. Through case studies and real-world applications of therapeutic humor, the field can be better understood and advanced for best practices and uses of this type of therapy. With this growing area of interest, research on humor in a patient care setting must be discussed. Cases on Applied and Therapeutic Humor focuses on humor in medical care and will discuss issues in humor research, assessment of the effectiveness of humor in medical settings, and examples of medical care in specific health settings. The chapters will explore how propriety, effectiveness, perception, and cultural variables play a role in using humor as therapy and will also provide practical case studies from medical/healthcare professionals in which they personally employed humor in medical practice. This book is ideal for medical students, therapists, researchers interested in health, humor, and medical care; healthcare professionals; humor researchers; along with practitioners, academicians, and students looking for

a deeper understanding of the role humor can play as well as guidance as to the effective and meaningful use of humor in medical/healthcare settings. This comprehensive casebook includes broad coverage of different organizations and industries as well as broad coverage of topics in management, organizational behavior, and human resource management. It features an updated case list with new cases on ethics, diversity, self-managed teams, TQM, and international situations in addition to an added focus on small businesses. [This] story has all of the forbidden romance, witty banter, and sigh-inducing declarations of love that you deserve' That's Normal The subject of murder has always held a particular fascination for us. But, since at least the nineteenth century, we have seen the murderer as different from the ordinary citizen—a special individual, like an artist or a genius, who exists apart from the moral majority, a sovereign self who obeys only the destructive urge, sometimes even commanding cult followings. In contemporary culture, we continue to believe

that there is something different and exceptional about killers, but is the murderer such a distinctive type? Are they degenerate beasts or supermen as they have been depicted on the page and the screen? Or are murderers something else entirely? In *The Subject of Murder*, Lisa Downing explores the ways in which the figure of the murderer has been made to signify a specific kind of social subject in Western modernity. Drawing on the work of Foucault in her studies of the lives and crimes of killers in Europe and the United States, Downing interrogates the meanings of media and texts produced about and by murderers. Upending the usual treatment of murderers as isolated figures or exceptional individuals, Downing argues that they are ordinary people, reflections of our society at the intersections of gender, agency, desire, and violence. *MIS Cases* gives students practice solving business problems using application software. Offers case studies to develop database skills, spreadsheet skills, and web development skills. For business professionals who would like to refine skills needed to solve managerial problems. This is the first edited volume dedicated specifically to humor in interaction. It is a rich collection of essays by an international array of scholars representing various theoretical perspectives, but all concerned with interactional aspects of humor. The contributors are scholars active both in the interdisciplinary area of humor studies and in adjacent disciplines such as linguistic pragmatics, sociolinguistics, discourse analysis, psycholinguistics, gender and translation studies. The volume effectively offers an overview of the range of phenomena falling in the broad category of 'conversational humor', and convincingly argues for the many different functions humor can fulfill, bypassing simplistic humor theories reducing humor to one function. All the articles draw on empirical material from different countries and cultures, comprising conversations among friends and family, talk in workplace situations, humor in educational settings, and experimental approaches to humor in interaction. The book is sure to become an important reference and source of inspiration for scholars in the various subfields of humor studies, pragmatics and (socio-)linguistics. This book journeys into the heart of dark passions and the crimes they impel. When passion is in the picture, what is criminal, what sane, what mad or simply bad? Brighton, 1870: A well-respected spinster infuses chocolate creams with strychnine in order to murder her lover's wife. Paris, 1880: A popular performer stalks her betraying lover through the streets of the city for weeks and finally takes aim. New York, 1906: A millionaire shoots dead a prominent architect in full view of a theatre audience. Through court and asylum records, letters and newspaper accounts, this book brings to life a period when the psychiatric professions were consolidating their hold on our understanding of what is human. An increasingly popular press allowed the public unprecedented insight into accounts of transgressive sexuality, savage jealousy and forbidden desires. With great story-telling flair, Lisa Appignanesi teases out the vagaries of passion and the clashes between the law and the clinic as they stumble towards a

(sometimes reviled) collaboration. Sexual etiquette and class roles, attitudes to love, madness and gender, notions of respectability and honour, insanity and lunacy, all are at play in that vital forum in which public opinion is shaped - the theatre of the courtroom. Talk of so-called fake news, what it is and what it isn't, is front and center across the media landscape, with new calls for the public to acquire appropriate research and evaluation skills and become more information savvy. But none of this is new for librarians and information professionals, particularly for those who teach information literacy. Cooke, a Library Journal Mover & Shaker, believes that the current situation represents a golden opportunity for librarians to impart these important skills to patrons, regardless of their age or experience. In this Special Report, she demonstrates how. Readers will learn more about the rise of fake news, particularly those information behaviors that have perpetuated its spread; discover techniques to identify fake news, especially online; and explore methods to help library patrons of all ages think critically about information, teaching them ways to separate fact from fiction. Information literacy is a key skill for all news consumers, and this Special Report shows how librarians can make a difference by helping patrons identify misinformation. The information systems (IS) field represents a multidisciplinary area that links the rapidly changing technology of information (or communications and information technology, ICT) to the business and social environment. Despite the potential that the IS field has to develop its own native theories to address current issues involving ICT it has consistently borrowed theories from its “reference disciplines,” often uncritically, to legitimize its research. This volume is the first of a series intended to advance IS research beyond this form of borrowed legitimization and derivative research towards fresh and original research that naturally comes from its own theories. It is inconceivable for a field so relevant to the era of the hyper-connected society, disruptive technologies, big data, social media, "fake news" and the weaponization of information to not be brimming with its own theories. The first step in reaching the goal of developing native IS theories is to reach an agreement on the need for theory (its rationale) and its role as the most distinctive product of human intellectual activity. This volume addresses what theories are, why bother with theories and the process of theorizing itself because the process of developing theories cannot be divorced from the product of that process. It will lay out a research agenda for decades to come and will be invaluable reading for any academic in the IS field and related disciplines concerned with information, systems, technology and their management. Written by international experts, this book explores the possibilities for the next 20 years in conducting gravitational experiments in space that would make the most of the new and much-improved existing capabilities. They start from the premise that over the next decade the gravitational physics community will benefit from dramatic improvements in many technologies critical to the tests of gravity. This volume contains a comprehensive presentation of the theory, technology, missions and projects on relativistic gravity in space. This go-to guide covers the entire process of building or renovating a public library—from initial planning, to maintaining the completed space, to measuring success. • Provides you with an informal, easy-to-read, practical guide

that addresses the specific needs of public librarians looking to reimagine their library space • Takes a holistic approach that covers every step from initial vision to evaluating success • Offers practical, nuts-and-bolts advice from an experienced veteran of the process • Helps you to claim a seat at the table—and shows you why the input of librarians is so important Explores the many issues surrounding living and working in a global environment. Relates how necessary it is for companies to conduct business while taking a global perspective to their operations. Relational Theory for Clinical Practice offers students and practitioners a conceptual framework for thinking relationally about social work with clients within a biological, psychological, and socio-cultural framework. Integrating relational theory with the principles of clinical practice, and demonstrating how this can be applied to social work practice, this book has been revised and updated to be suitable for students. Using plenty of case material to demonstrate the theory in action, the new edition incorporates teaching points to aid readers in drawing out the practice principles developed in each chapter. Keeping relationships at the center of the text, this edition includes substantially expanded chapters on assessment and intervention, and takes into account recent research on issues such as the impact of trauma and stress; neuroscience and brain research; and the necessity of practicing in a culturally sensitive way with diverse populations. It broadens the feminist focus of relational-cultural theory by extending and applying it to men also. Designed for use on master's level courses in practice, as well as courses on human behavior and the social environment, this concise and practical book is a valuable text for social work and counseling students. This volume has been composed as an appreciation of Martin L. Albert in the year of his 60th birthday. At least one contributor to each paper in this volume has been touched by Marty in some way; he has mentored some, been a fellow student with some, and been a colleague to most. These contributors, as well as many others, view Marty as a gifted scientist and a wonderful human being. The breadth of his interests and intellectual pursuits is truly impressive; this breadth is reflected, only in part, by the diversity of the papers in this volume. His interests have ranged from psychopharmacology to cross-cultural understanding of dementia, through the aphasias, to the history of the fields that touch on behavioral neurology, especially neurology per se, cognitive psychology, speech-language pathology, and linguistics. Throughout his scholarly work, Martha Taylor Sarno notes, Marty never loses the human perspective, e. g. , the “powerfully disabling effect on the individual person” with aphasia or other neurological disorder. For those readers who only know a portion of his work, we thought that we should describe him here. Many of the people whom Marty has influenced have been able to contribute to this volume. We have invited some others who were unable to contribute to express their appreciation for him, as well. Digital networking technologies are empowering organizations to form dynamic networks, generating exceptional or

'smart' results. These Smart Business Networks (SBNs) enable individual organizations to compete more effectively and to respond better to a changing world. This idea attracted a diverse group of academic scholars and business professionals to Beijing from May 19-23, 2008, hosted by Tsinghua University. They discovered new ways to manage network resources, operate business processes across a network, create a business operations platform, understand the importance of network position and the smart mastering of technology. Effective managers, they concluded, must have a firm understanding of these fundamental network concepts in order to orchestrate the networks of the future. This book presents the results of an intense and energizing event which resulted in new theoretical foundations and practical insights.
